

**SolarInvert Energy Solutions**

# **Wind solar thermal and storage restrictions**

## Overview

---

Can we combine wind and solar power with traditional thermal energy?

This paper introduces a comprehensive plan that combines wind and solar power with traditional thermal energy and battery storage in our power network. It starts by creating realistic examples of what wind and solar power might look like in the future, using a special kind of AI called GANs.

How does energy storage affect thermal power output?

The energy storage is charged during the highest and lowest points of the load, and at the highest point, it is released to fulfill the peak demand. Currently, there is a decrease of 23.2% in the variation of thermal power output when compared to scenario 2.

How have provincial government mandates impacted renewables curtailment in China?

To date, more than 20 provinces have issued such mandates and some provincial governments have upped their mandatory ratios for energy storage projects to 20%, up from 10% a couple of years ago. These requirements have helped mitigate renewables curtailment in China.

How can hydropower and energy storage system improve thermal power output?

Considering the extreme output of wind power and photovoltaic power as the scene, the use of hydropower and energy storage system to alleviate the output fluctuation of thermal power units can make the total output of thermal power as stable as possible.

Why is solar power not used in Scenario 1?

Figure 8 shows that in Scenario 1, coal or gas power plants ramp up to cover the high demand in the evening, leading to too much power being made earlier in the day, around 2:00 p.m. to 4:00 p.m., which means some of the

solar and wind power is not used.

Will battery storage reverberate through global supply chain?

S&P Global expects the move to reverberate through the global battery storage supply chain, further driving down prices already at historic lows. From ESS News New renewable energy plants in China will no longer be required to build storage in order to secure development rights and grid connection.
