

SolarInvert Energy Solutions

Battery cabinet automation

Overview

Why is battery assembly important?

In the competitive world of electric vehicles and energy storage, efficient and precise battery assembly is crucial for meeting high performance and safety standards. At JOT Automation, we provide cutting-edge solutions for battery module assembly and battery pack assembly, ensuring seamless integration and optimized production.

What is a battery assembly solution?

The comprehensive Battery Assembly solution can be equipped with an array of options, including unpacking, waste disposal, electrical testing, enclosure and casing assembly, PCB assembly, laser welding and final-product testing. Plus the solution's compartmentalized design ensures high-grade fire safety to keep its processes and surroundings safe.

Why are battery machine builders turning to automation?

With the demand for battery solutions driven by global green energy trends outstripping machine supply, strong competition is necessitating smarter approaches to battery machine design. Battery machine builders are turning to automation to stay ahead of the curve.

What is the Jot battery assembly solution?

Watch the JOT Battery Assembly Solution in action. JOT Automation's industry-leading battery assembly solution is a fully complete, turnkey solution for battery assembly that is also EV battery compatible. Highlights include automated unpacking of incoming material, testing, welding applications and final-product testing.

Why do you need a robot for Battery trays?

Fast, accurate and flexible cells and smart systems, supported by our robots, offer the ideal solution for automating battery pack and battery module

assembly applications. Our solutions enable faster, more precise, and more cost-effective production of battery trays, as well as better quality control and improved safety for workers.

What are automated solutions for the application of thermal interface layers?

Automated solutions for the application of the thermal interface layers that provide a thermal path between the battery cells. Automated solutions for flow drill screwing, a method of fastening parts together with the aid of heat from friction.
