

## SolarInvert Energy Solutions

# Booster station uninterruptible power supply load

## Overview

---

What is an uninterruptible power supply system (UPS)?

To improve the efficiency of the power supply system, an uninterruptible power supply system (UPS) has been developed, which differs from the existing analogs, allows to reduce the peak power of the connected load, and is presented in Fig. 3.4 [25, 26]. Figure 3.4. Block diagram of the uninterruptible power supply system.

How do I determine the appropriate uninterruptible power supply (UPS) size?

Calculate the appropriate uninterruptible power supply (UPS) size by entering your equipment power requirements and backup needs below. This calculator helps determine the correct UPS capacity in VA (Volt-Amps) and required battery runtime based on your connected load and desired backup duration.

Why is a battery important for an UPS system?

UPS STATIC UNINTERRUPTIBLE POWER SUPPLIES TECHNICAL GUIDE 17  
CONTENTS WWW.LEGRAND.COM Batteries are essential for the UPS system: they ensure continuity of power supply by providing energy to the inverter (for the required period) when there is no power supply . It is therefore essential that they are always connected, functioning, and charged .

Why do you need a power redundancy UPS unit?

The use of a UPS unit with power redundancy allows the consumer to provide the necessary high-quality level of power supply, choosing the capacity of the battery station and installing its own additional autonomous power supply source of the required power.

Should a ups be connected to a power supply?

It is therefore sufficient to keep the UPS connected to the power supply, even if not in use, so that the batteries remain alive and active . The UPS must always be connected to the batteries and report any disconnections or

malfunctions promptly so that it is able to function correctly .

What is a voltage independent ups?

- VI (Voltage Independent): this is the UPS in which the variations in the power supply voltage are stabilised by electronic/passive regulation devices within the limits of routine operation .
