# Construction process of Abuja communication base station

## Overview

---

What is a base station?

A base station is a wireless telephone exchange, designed to provide local connections with wider links to other national and international networks. Each base station provides coverage over a limited area, or cell, around its location. The cell covered by a base station depends on the call usage and the physical terrain of the area (Bello, 2010).

Should a GSM base station be located in Nigeria?

The World Health Organization's (WHO) 2007 regulations for locating a GSM base station in Nigeria were subsequently adopted by the Nigerian Communications Commission (NCC) in cooperation with the National Environmental Standard Regulatory Enforcement Agency (NESREA). These regulations state that a mast should be (Godswill et al., 2016); 1.).

Why are telecommunication masts and base transceiver stations indiscriminate?

This demand has in turn led to the indiscriminate erection of telecommunication masts and Base Transceiver Stations across the country (Nigeria communication commission [NCC], 2014). Base Transceiver Stations (BTSS) and Masts form part of the infrastructure required for an effective telecommunication system.

Why is ABA a important city in Nigeria?

Aba is a very influential city in Nigeria as it is a major economic hub for not only Nigeria but the entire West African sub-region. Abia State is the pivot of communication in south-eastern Nigeria, and very strategic for the operations of all telecommunications industries in Nigeria. This informed our choice of the State for this enquiry.
