

## SolarInvert Energy Solutions

**Does the photovoltaic panel factory have fiberglass panels**

## Overview

---

What are photovoltaic (PV) panels?

Photovoltaic (PV) panels convert solar energy into electrical energy with peak efficiencies ranging from 5-20%, depending on the type of PV cells. [7] The National Action Plan on Climate Change (NAPCC) is the main key plan for the development of solar energy technologies in India.

How are solar panels made?

Sealed into ethylene vinyl acetate, they are put into a frame that is sealed with silicon glue and covered with a mylar back on the backside and a glass plate on the front side. This is the so-called lamination process and is an important step in the solar panel manufacturing process.

How do solar panels work?

After having produced the solar cells and placed the electrical contacts between the cells, they are then wired and subsequently arrayed. Sealed into ethylene vinyl acetate, they are put into a frame that is sealed with silicon glue and covered with a mylar back on the backside and a glass plate on the front side.

## Does the photovoltaic panel factory have fiberglass panels
