Electromagnetic strength of 5g base stations

Overview

Does a 5G base station increase field levels?

Adding the 5G systems does not significantly increase the overall field levels in the surroundings of the base station, in normal working conditions, compared to those of the previous generation. This has been checked during a measurement campaign in the surroundings of a 5G base station under operation.

Do 5G base stations need a field meter?

Fast variation of the user load and beamforming techniques may cause large fluctuations of 5G base stations field level. They may be underestimated, resulting in compliance of base stations not fitting the requirements. Apparently, broadband field meters would not be adequate for measuring such environments.

Does 5G signal exposure affect base station compliance?

This agrees with measurements done in other countries whose authors conclude that the exposure to 5G signals is limited , , , but this does not assure the base station compliance as full load situation should be considered for such assessment. It also shows that the increase in the EMF field is due to the induced data traffic.

Why is a 5G network a challenge?

5G networks deployment poses new challenges when evaluating human exposure to electromagnetic fields. Fast variation of the user load and beamforming techniques may cause large fluctuations of 5G base stations field level. They may be underestimated, resulting in compliance of base stations not fitting the requirements.

What is a dominant contribution to 5G signal quality?

The uncertainty associated to the user load clearly represents the dominant

contribution. Fig.4. Spectrum of 5G signals with 0 % (purple), 10 % (yellow), 50 % (green), and 100 % (blue) load. 4. Measurement setup and environment.

Can broadband field probes be used for 5G exposure assessment?

The use of broadband field probes for 5G exposure assessment is still possible under certain considerations and correcting the results considering the base station load and beamforming effects. 5G networks deployment poses new challenges when evaluating human exposure to electromagnetic fields.

Electromagnetic strength of 5g base stations

Application of electromagnetic shielding ...

Jul 26, 2024 · 5G communication electromagnetic waves include two frequency bands, FR1 and FR2. Among them, the frequency range of FR1 is 450MHz ~ ...
