Fire resistance rating of outdoor inverters

Overview

What is the IP rating of an inverter?

The IP rating of an inverter refers to the level of protection it provides against the intrusion of solid objects (such as dust) and liquids (such as water). It is usually expressed as “IP” followed by two digits, where the first digit represents the level of protection against solids and the second digit represents protection against liquids.

Why do premium inverters have a fire safety function?

This is a function of monitoring the DC cabling system and the earthing outside the inverter. This is an additional non-standard fire safety function of premium inverters and is there to detect inadequate installation of DC cabling and/or new faults that occur over time.

How does the IP rating affect an inverter's suitability?

Let's examine how the IP rating affects an inverter's suitability for outdoor and harsh environments. An inverter with a high first-digit rating (e.g., IP65 or IP66) provides complete protection against dust and dirt, preventing it from entering the unit and causing internal damage.

How do I Choose an inverter for a solar energy system?

When selecting an inverter for a solar energy system, one important factor to consider is its IP (Ingress Protection) rating. The IP rating indicates how well the inverter is protected against dust, moisture, and other environmental factors.

What is an IP65 rated inverter?

The higher the number, the better the protection. For example, an IP65 rating means the inverter is completely dust-tight (level 6) and has no entry of dust particles that could affect its performance. To learn more about solid protection levels, visit [here](#) 1.

What is a good first digit rating for an inverter?

An inverter with a high first-digit rating (e.g., IP65 or IP66) provides complete protection against dust and dirt, preventing it from entering the unit and causing internal damage. This is particularly important in areas with heavy dust or pollution, as dirt particles can interfere with the inverter's cooling system or internal electronics.
