

SolarInvert Energy Solutions

Haiti Outdoor Power Green

Overview

How does Haiti support energy projects?

Because the Haitian institutions involved in energy affairs are relatively weak and uncoordinated, financial support for energy projects is often channeled directly through multilateral development banks or international NGOs, with limited coordination or oversight by the Haitian government.

Can wind power deliver electricity in Haiti?

Estimates suggest that wind power can deliver electricity at 30-50% of the cost of solar energy in windier areas. Though there are no plans to build wind farms in Haiti, the construction of a power plant did begin in 2017. Not only will the plant optimize wind but it will also be the first to utilize a mixture of wind, solar and diesel energy.

Does Haiti have a power grid?

Haiti does not have a country-wide power grid, leaving many communities without access. In addition to utility-scale solar, this report discusses the potential for rural electrification through standalone solar systems. The Office of the Minister Delegate also advised on the selection of the six wind zones.

Why is solar energy important in Haiti?

In Port-au-Prince, the commercial center of Haiti and home to one-quarter of the population, solar energy provides the unique opportunity for commercial and residential power generation and water heating. Haiti does not have a country-wide power grid, leaving many communities without access.

Are battery systems a viable option for energy storage in Haiti?

These systems store surplus renewable energy generated during periods where production exceeds demand, and dispatch this energy at times of low renewable generation. Because battery systems are currently the most mature and widely implemented energy storage technology, they are the

most likely option to be implemented in Haiti in the near term.

Is solar energy a viable option in Haiti?

Although all six study sites studied in detail in this Roadmap have strong solar energy potential, other sites in Haiti boast even higher GHI levels, above 7 kWh/m²/day. At the grid scale, solar PV or CSP development may be viable between Saint-Marc and Gonaives and around Cap-Haïtien.
