

## SolarInvert Energy Solutions

# Huawei tool battery parameters are generally

## Overview

---

What parameters are displayed when a battery model is set?

These parameters are displayed when Battery Model is set to a lead-acid battery model. The float charge voltage should be lower than the equalized charge voltage. The equalized charge voltage should be greater than the float charge voltage. Set this parameter based on the actual condition.

What is Huawei solar tools?

Huawei Solar Tools is a Python library for interacting with Huawei solar inverters, batteries, power meters, and energy management interfaces (EMI) using Modbus TCP. It provides methods to read and write Modbus registers, retrieve operational data, and interpret register values. Establishes Modbus TCP communication with Huawei solar devices.

What Python do I need to use Huawei solar tools?

Huawei Solar Tools requires Python 3.9+. `pip install` . The following examples demonstrate how to use the Huawei Solar Tools library for basic interactions. For more detailed examples, refer to the scripts in the `tests/` directory.

What are the features of Huawei smartlogger?

Registers include power factor, phase-by-phase power, and total energy consumption. Environmental monitoring (wind speed, wind direction, temperature, irradiance). Supports data logging and integration with Huawei SmartLogger. Supports data collection and communication with multiple Huawei devices.

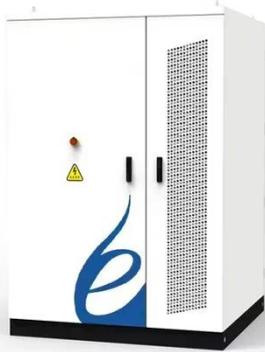

How to set battery cable length based on site requirements?

Set this parameter based on the site requirements. When each battery string is connected to the RTN+ busbar using one cable, set Battery Cable Length to half of the total length of cables between both ends of a battery string and the positive and negative busbars, and set `BatCableCrss-SecArea` to the cross-

sectional area of the cable.
