

## SolarInvert Energy Solutions

# Maldives signal base station energy method

## Overview

---

What is the most important energy conversion in Maldives?

In Maldives the most significant energy conversion is from diesel energy to electricity. Nearly 100% of all electricity produced in Maldives is from diesel based systems. The generation and distribution of the electrical systems are decentralized with each separate island operating a self-sustaining diesel power generation and distribution system.

How is electricity produced in Maldives?

Nearly 100% of all electricity produced in Maldives is from diesel based systems. The generation and distribution of the electrical systems are decentralized with each separate island operating a self-sustaining diesel power generation and distribution system. Demand side energy consumption in Greater Male' Region.

Which energy sources are used in Maldives?

In Maldives, wind and biomass are other energy sources used. Currently, there are no wind masts or biomass plants in operation. However, a small amount of charcoal is imported for use, such as for barbecues.

Who is allowed to install power systems in Maldives?

All power systems and electrical installations must comply with the regulations of Maldives Energy Authority. Licensed engineers and consultants are only allowed to carry out works related to power. This includes design, installation and commissioning of power systems. The energy balance is a multipurpose tool.

How much tCO<sub>2</sub> does Maldives emit per year?

Maldives is a country striving for low carbon development and energy use is their main contributor to its emissions (>80%). During this period the emission from energy use had been increasing at a rate of about 6-8% per year. This

gives an increasing trend of 75,527 tCO<sub>2</sub> per year by energy sector alone.

What is DB & DB network in Maldives?

daN: decaNewton. DB: Distribution Board, where electrical power feed is divided into multiple circuits. Distribution Network: group of assets and equipment required for the distribution of electricity in the Republic of Maldives, comprising voltage levels not higher than 35 kV.
