

## SolarInvert Energy Solutions

# Solar 3g power system

## Overview

---

Does 3G affect solar production?

Production-wise, 3G does not impact your solar system's ability to produce clean energy. The cellular device in the inverter is merely the communication method that enables system monitoring, and while it is housed within the inverter, it does not impact solar production.

Will the 3G mobile network phaseout affect solar installation?

With the 3G mobile network phaseout beginning at the end of February, a free tool has been developed to help solar installers target projects in need of an upgrade. Inverters connected to the 3G network will stop communicating when mobile carriers make room for 5G, directly impacting remote monitoring of solar systems.

How does the 3G shutdown affect solar?

This means that the 3G shutdown is not only affecting solar customers nationally, but also multiple other industries, and every wireless device operating in the country with a 3G modem. Most solar power systems, including those installed by Palmetto, use a solar inverter with a cellular signal device and its own cellular data plan.

What is a 3G cellular network?

3G cellular networks offered data transfer speeds of at least 144 Kbps. Later versions of 3G, also commonly known as 3.5G and 3.75G, allow mobile modems in laptop computers and smartphones with mobile broadband connectivity of many megabits per second. In fact, some 3G networks could go as high as 7Mbps.

Will a loss of 3G affect a solar system?

The solar cells within the solar panels harness the energy in the sun's radiation and use it to generate electricity. Nowhere in this entire process is

the 3G network used, and therefore, the loss of 3G will not directly diminish the performance of solar systems.

Why is my 3G modem not working on SolarEdge?

A Your SolarEdge system was supplied with a modem that includes a built-in, prepaid 3G cell card, connecting your system to the SolarEdge server in the cloud. 3G is being discontinued by T-Mobile, which will cause your cell card and modem to stop performing. Unfortunately, this change is out of SolarEdge's control.
