Uninterruptible Power Supply in Rural Areas

Overview

What is an outdoor Uninterruptible Power Supply?

An outdoor Uninterruptible Power Supply is a power solution designed for critical applications where it's essential that equipment stays running in harsh outdoor environments and significant temperature variations, where an ordinary UPS would fail. Trust TSi Power for these applications.

What is an uninterruptible power supply system (UPS)?

To improve the efficiency of the power supply system, an uninterruptible power supply system (UPS) has been developed, which differs from the existing analogs, allows to reduce the peak power of the connected load, and is presented in Fig. 3.4 [25, 26]. Figure 3.4. Block diagram of the uninterruptible power supply system.

Why do you need a power redundancy UPS unit?

The use of a UPS unit with power redundancy allows the consumer to provide the necessary high-quality level of power supply, choosing the capacity of the battery station and installing its own additional autonomous power supply source of the required power.

How do power supply systems improve efficiency?

The efficiency of power supply systems is achieved through the use of uninterruptible power supply units installed at consumers of electricity. The unevenness of electricity consumption is the main factor that increases the cost of electricity generated, expressed in terms of fuel consumption at power plants.

How much electricity does a rural settlement use?

For a rural settlement, consisting of 150 residential buildings with an average daily electricity consumption of 5 kWh per house, the total daily consumption of a rural settlement is 750 kWh [, , ,]. Fig. 3.2 shows the daily load capacity

graph of a small rural town. Figure 3.2.

What is a centralized power supply system?

A centralized power supply system for large cities and small settlements is a complex engineering structure containing energy sources, transmitting and switching devices, converting and protective equipment, and receivers and consumers of electricity.
